

Maintenance & Reliability Department Dashboard

Abanoub George

The need for dashboard

- Plant's maintenance department update their data daily from different resources without any visual available.
- Top management find it difficult to view and follow with any KPIs from maintenance department due to the lack of visualization.
- This was the motivation to build dashboard for the department showing important KPIs & metrics need to be visualized to top management

Data Cleaning

- Remove Unnecessary columns (not needed for analysis).
- Validate data, check for errors and inconsistencies in dataset.
- Handle missing values, detect missing values and replace them.
- Ensure data consistency by converting data types (e.g., text, numbers, dates).
- Split columns that contain multiple pieces of information into separate columns.

ACI Projects Savings in \$

- Line & stacked column chart shows year-to-date savings in \$ for different department projects against year-to-date planned savings in \$

Bad Actor Assets

- Scatter chart shows bad actor assets (assets that have high repetitive number of failures with high downtimes), ranking top 3 bad actor assets in bolded colors.
